WHAT IS CLAIMED IS:

- 1. A surface layer, comprising:
 - a substrate element;
- a plurality of layers, of which one layer is a transition layer to the substrate element;

wherein the surface layer includes a ceramic layer containing a chemically bonded metal, and wherein the substrate element is a metallic substrate element; and

wherein the transition layer contains intermetallic phases comprising the metal of the substrate element and the metal of the ceramic layer.

- 2. The surface layer according to Claim 1, wherein the ceramic layer comprises an oxide ceramic.
- 3. The surface layer according to Claim 1, wherein the ceramic layer comprises at least one of a titanium-containing and silicon-containing oxide ceramic.
- 4. The surface layer according to Claim 2, wherein the ceramic layer comprises at least one of a titanium-containing and silicon-containing oxide ceramic.

- 5. The surface layer according to Claim 1, wherein the substrate element comprises an alloy material based on at least one of aluminum and iron.
- 6. The surface layer according to Claim 2, wherein the substrate element comprises an alloy material based on at least one of aluminum and iron.
- 7. The surface layer according to Claim 3, wherein the substrate element comprises an alloy material based on at least one of aluminum and iron.
- 8. The surface layer according to Claim 1, wherein the transition layer contains aluminum titanates and aluminum oxide.
- 9. The surface layer according to Claim 2, wherein the transition layer contains aluminum titanates and aluminum oxide.
- 10. The surface layer according to Claim 3, wherein the transition layer contains aluminum titanates and aluminum oxide.
- 11. The surface layer according to Claim 5, wherein the transition layer contains aluminum titanates and aluminum oxide.

12. A process for producing a surface layer comprised of a plurality of layers, of which one layer is a transition layer to a substrate element, the process comprising the acts of:

applying a ceramic layer to a metallic substrate element;

causing a reaction between the metal of the substrate element and the ceramic layer by introducing energy; and

producing, during said reaction, a transition layer containing intermetallic phases.

- 13. The process according to Claim 12, wherein the ceramic layer is applied by one of: a thermal spraying process, a slip technique, and by a painting technique.
- 14. The process according to Claim 12, wherein energy is introduced via at least one of an infrared heating source, a laser, and an induction heat source.
- 15. The process according to Claim 13, wherein energy is introduced via at least one of an infrared heating source, a laser, and an induction heat source.
